What is the Ultra Low Flush Toilet (ULFT) Program?

- The program will assist businesses, public agencies, home and apartment owners with costs related to replacement of their out-of-date and high water-using toilets. This program began on February 1, 2007 and is subject to budget funding each fiscal year. Rebates are "first come, first served" and will continue until all ULFT rebates have been awarded each funded year.
- The City of Tracy will rebate up to \$125.00 for ULF toilet(s) for voluntary installations **in pre-1994** single-family residences (**up to three toilets**) and businesses, public buildings, schools, and multi-family complexes, (**up to four toilets** per building) subject to the water conservation coordinators discretion. The rebate is for replacement of complete toilets (tank and bowl) that use 3.0 or more gallons per flush (GPF) with a new 1.6 GPF toilet.
- Covered rebate expenses include the 1.6 GPF tank, bowl, supply line, wax ring, caulking, seat, bolts, bolt covers, tax, and professional installation. The maximum rebate will not exceed \$125 per toilet.

Why is this program available?

- The City of Tracy is supporting an effort to maximize water resources, use cost effective conservation programs for water management, and comply with state and federal mandated requirements.

Who is eligible to participate in this program?

- City of Tracy utility customers with toilets that use 3.0 gallons or more per flush (GPF) in pre-1994 buildings. The City of Tracy is not responsible for equipment purchased or work performed in conjunction with this program.
- As a guideline to help you determine if your toilet uses 3.0 or more GPF is as follows: Toilets manufactured in the pre-1970 era use 7.0 gallons of water each time they are flushed. Pre-1980 toilets use 5.5 gallons per flush and post-1980 toilets use between 5.5 and 3.5 gallons per flush. The Water Resources Coordinator can help you determine the flush volume if you are not sure of the age or size of your existing toilet(s).

How does this program work?

- Call the City of Tracy Water Resources Division at (209) 831-4333 if you have any questions regarding whether your residence, business, agency, or multi-family complex qualifies for this rebate.
- You will be asked for your name, address, disposal method, and how many toilets you will be replacing.
- The ULFT Rebate application form is available on the City's website at www.ci.tracy.ca.us/departments/public_works/water_resources. For pickup, you may come to the Wastewater Treatment Facility at the address below between 6 am and 3:30 pm Monday - Thursday or from a local retailer.
- Replace your existing 7, 5.5, or 3.0 GPF or greater toilet(s) with a new 1.6 or less gallon per flush toilet.
- Properly dispose of the replaced toilet at the local Materials Recovery Facility or crush and place the pieces in your garbage container for pick-up on normally scheduled trash collection day.

What to do to receive the ULFT rebate:

- Complete the application form, leaving no blank spaces.
- Attach valid sales receipt(s) for the purchase of each qualifying toilet and materials. If professionally installed, then the receipt for labor to install the new ULFT must be attached.
- Install your new ULF toilet(s).
- City staff or its contracting agent may ask for verification of the proper disposal of the older replaced toilet.
- After an application has been approved, and any verifications have been received, the voucher will be requested. A rebate will be mailed within 45 days after all information is verified.

Old toilet destruction procedures:

- Prepare the old toilet(s) by cleaning, sanitizing and separating the toilet tank from the toilet bowl. The City inspector or approved agent will ask for verification of disposal method if necessary. The person signing this form will be responsible for safely destroying the old tank and disposing of all other parts for trash collection or removal.

Additional benefits participants may receive free of charge are:

- Interior water use survey
- Plumbing retrofit materials such as low-flow showerheads and faucet aerators for the bathroom and kitchen
- Exterior landscape water use survey
